
GatorCup

AnnaRose Wheatle, Nivedhaa Sankaran, Kriti Shah

Version: 1.0

Overview:

The theme of our game is a soccer tournament that resembles the World Cup. You must pass all three levels and the levels will continue to get tougher. Once you complete all three levels, you will be the winner of the GatorCup.

Game Description:

Objective - The objective of the game is to win all three levels to become the winner of GatorCup.

Gameplay - The game begins with you being at the main menu where you have the start button and the instructions button. When the instructions button is clicked, you see the instructions manual with details on how to play the game. Then, when you click the start button, you are taken to a different screen that shows you the three levels that you must win and complete. Once you click level 1, you must score 10 goals in less than a minute to proceed to the next level. For all of the levels you must score 10 goals in less than a minute. Once you win the first level, you are taken to the second level where the goal is now moving up and down which makes it harder to score. Once you complete level 2, you are then taken to level 3 where the goal is moving up and down and there is also a block moving up and down in front of the goal to block your shot. Once level 3 is completed you are taken to a screen that says “You are the Gator Cup Champion”. The screen also shows a trophy and a button that is labeled main menu that will restart the game and take you back to the menu.

Controls - The game uses a mouse-based interface throughout the game. From the main menu, the player can click Start to begin or Instructions to view how to play. Levels are completed in order, therefore, level 1 must be finished before unlocking level 2, and level 2 before level 3. During gameplay, the player clicks and drags the ball to aim, with a red line showing direction and power, then releases the mouse to shoot. The screen displays the score and remaining time. After each level, the player either advances or restarts, and after completing all levels, a Main Menu button allows the game to restart.

User Menu:

Welcome to GatorCup! Prove you have what it takes to become the University of Florida GatorCup Champion!

Your Objective:

Score goals, beat the clock, and complete all the levels to claim your title as the ultimate GatorCup champion.

How to Play:

- Click on the soccer ball to grab it.
- Drag your mouse to aim your shot, the red line shows direction and power.
- Release to kick the ball toward the goal.
- Score by landing the ball inside the goal area.
- Reach the required number of goals before time runs out!

Controls:

- Mouse Click + Drag → Aim your shot
- Mouse Release → Kick the ball

Buttons:

- Start → Enter the field and begin your journey
- Instructions → View how to play
- Restart Level → Try the level again
- Restart Game → Return to the main menu

Hotkeys:

- None; all controls are done using the mouse.

Roles and Responsibilities of Each Team Member:

Nivedhaa Sankaran - Helped set up the overall project structure and kept the GitHub repository updated. Worked on connecting different parts of the game, including linking pages, implementing level progression, developing Level 3, and creating the final win page.

AnnaRose Wheatle - I helped set up the overall project structure by helping make the menu page and buttons for the levels. Also, I wrote and developed the instruction manual. I implemented level 2 by making the goal move so it can be harder to score. Lastly, I continued to work with team members by communicating and sending them my updated code to add to the GitHub repository.

Kriti Shah - Contributed by importing all images. Designed the core gameplay mechanic by implementing the drag-and-shoot interaction, allowing users to click, aim, and release the ball toward the goal. Additionally, contributed to project organization by consistently pushing updates to GitHub to track progress.
